## What does meaning even mean?

- From the smack-tweeting Merriam-Webster:<sup>1</sup>  
“The thing that is conveyed especially by language”
- What are the essential characteristics of meaning?
- Does essential meaning meaningfully span some kind of space?

<sup>1</sup>Life goal: Never get owned by a dictionary on social media

# This is not easy:

PoCS  
@pocsvox

Meaning

## “Abed’s Uncontrollable Christmas”

- 🧩 Abed searches for the meaning of Christmas (in stop animation)
- 🧩 Abed Nadir: [opens present] “It’s the first season of Lost on DVD.”
- 🧩 Pierce Hawthorne: “That’s the meaning of Christmas?”
- 🧩 Abed Nadir: “It’s a metaphor. It represents lack of payoff.”

## “Introduction to Teaching”

Abed Nadir: “I thought the meaning of people was somewhere in here. Then I looked inside Nicolas Cage and I found a secret—people are random and pointless.”

# The meaning of pings:

PoCS  
@pocsvox

Meaning

“A factorial study of complex auditory stimuli (passive sonar sounds)” 

L. M. Solomon,

Unpublished doctor's dissertation, University of Illinois, , ,  
1954. <sup>[22]</sup>

## From the introduction:

“This study represents the convergence of three disparate areas of investigation in an attempt to analyze one of the many problems encountered in the study of human factors in undersea warfare. The domains referred to are these:

-  naval sonar,
-  the nature of “meaning,”
-  and multidimensional scaling techniques.

The problem may be stated as follows: In the detection and recognition of underwater sounds by the use of sonar equipment, what are the discriminative cues employed by the sonar operator?  
More generally, what factors does the operator utilize in decoding the significance of sonar signals?”

## “The Measurement of Meaning” by Osgood, Suci, and Tannenbaum (1957). <sup>[14]</sup>

Osgood et al. used **semantic differentials**  and **factor analysis** to identify a basis of three variables for meaning-space:

**Evaluation:** bad ↔ good

**Potency:** weak ↔ strong

**Activity:** passive ↔ active

100s of students, 10s of things, 50 semantic differentials

# Essential dimensions captured by emotion:

PoCS  
@pocsvox

Meaning

 Late 1800s: Three dimensional representation of emotion postulated by Wendt. [23, 17]

 1970s: Mehrabian and Russell explicitly port EPA framework: [8, 9]

 Evaluation ~ Pleasure/Valence (~ Happiness)

 Potency ~ Dominance

 Activity ~ Arousal

 VAD has become standard nomenclature even though emotion is less general than meaning.

 Explicit presumption of independence of VAD dimensions, has hardened as fact.

 Intention that VAD  $\equiv$  EPA has become lost in literature. [2]

## "The basic emotional impact of environments"

Mehrabian and Russell, Perceptual and motor skills, **38**, 283–301, 1974. [9]

*"Semantic differential studies, in particular, have shown that human judgments of diverse samples of stimuli can be characterized in terms of three dimensions: evaluation, activity, and potency. We have termed the corresponding emotional responses pleasure, arousal, and dominance."*

*"Thus, each dimension is, in principle, functionally independent of the other two; none of the three dimensions could be subsumed by the others."*

# Major problems with measuring essential meaning:

1. **Scale:** Originally 10s and 100s of words → now 10,000s + online rating.
2. **The focus on types alone and not tokens:** Missing the forest for the book of tree species.
3. **The use of Likert scales for semantic differentials:** Solid but can be improved upon.
4. **Limitations of factor analysis for a large number of categorical dimensions:** Ousiograms will help sort things out.
5. **The misalignment between expert-chosen, end-point descriptors and dimensions of essential meaning:** How to guide raters to score VAD dimensions?  
Solution is to always perform factor analysis (SVD).

## ANEW study: Valence ~ Happiness:

🧱 Valence scale presented to participants as a 'happy-unhappy scale.'

🧱 Participants were further told:

"At one extreme of this scale, you are happy, pleased, satisfied, contented, hopeful. ...

The other end of the scale is when you feel completely unhappy, annoyed, unsatisfied, melancholic, despaired, or bored."

🧱 The Hedonometer was always about essential meaning.

## We now know that ANEW is a no-no:

🧱 Problem: Expert-chosen list of ~ 1,000 words.

🧱 Fine words but poorly cover real texts <sup>[16]</sup>.

🧱 Wrongly suggests Arousal and Dominance are minimal relative to Valence.

# Remeasuring meaning:

“Obtaining Reliable human ratings of valence, arousal, and dominance for 20,000 English words” ↗

Saif M. Mohammad,  
Proceedings of The Annual Conference of  
the Association for Computational  
Linguistics (ACL), **38**, , 2018. [11]

## Moving beyond Likert scales:

🧱 Best-worst scaling ↗

🧱 Ask raters to examine  $n$  things once, and choose the best and worst according to some criterion.

🧱 For  $n = 4$ , there are 6 pair comparisons of Things.

🧱 Choosing best and worst gives 5 orderings:

$$\tau_1 > \tau_2, \tau_3 > \tau_4.$$

🧱 Things end up with scores in  $[0, 1]$ .

## NRC VAD Lexicon <sup>[11]</sup>

<b>VAD endpoints:</b>	<b>Paradigm words and phrases presented to raters:</b> <sup>[12]</sup>
highest valence	happiness, pleasure, positiveness, satisfaction, contentedness, hopefulness
lowest valence	unhappiness, annoyance, negativeness, dissatisfaction, melancholy, despair
highest arousal	arousal, activeness, stimulation, frenzy, jitteriness, alertness
lowest arousal	unarousal, passiveness, relaxation, calmness, sluggishness, dullness, sleepiness
highest dominance	dominant, in control of the situation, powerful, influential, important, autonomous
lowest dominance	submissive, controlled by outside factors, weak, influenced, cared-for, guided

Major problem 5: Imposing dimensions through clouds of endpoint descriptors.

# NRC VAD study: 20,007 words:

PoCS  
@pocsvox

Meaning

Standard correlations suggests a bit of Barney Rubble:

$$R(V, A) \simeq -0.268$$

$$R(A, D) \simeq 0.302$$

$$R(D, V) \simeq 0.488$$

# Etymological, taxonomic, and nomenclatural madnesses:

- 🧱 Physics: Power was once sometimes called Activity
- 🧱 Danger ↗ and Dominance trace back to Dominus ↗  
(~ lord/ruler/person of power)
- 🧱 Framing words for EPA, VAD, etc., matter greatly.

## Other descriptors that don't hold up:

- 🧱 Success-Stress-Structure.
- 🧱 Energy/Flourishing/Thriving-Threat
- 🧱 Power-Order/Chaos-Gravity/Seriousness

## After much staring at the ceiling:

- 🧱 Goodness-Energy-Structure (GES) (still fails)
- 🧱 Power-Danger-Structure (PDS) (succeeds)

# Findings, observations, possibilities:

- Power-danger-structure framework emerges in distinct settings, fitting types and tokens.
- Safety bias of communication refines Pollyanna Principle of positivity
- Happiness/Goodness = Power + Safety
- Ousiometer can be improved and refined.
- Possible: Emotions map onto powerful-safe and danger axes.
- Power-danger framework for survival.
- Possible: Telegnomics for stories—Measuring character arcs, plots.
- Complement to information theory which is meaning-free. [21]

See concluding remarks in the foundational paper. [5]
