'Laws'

- ▶ Hack's law (1957) [6]:

$$l \propto a^h$$

reportedly $0.5 < h < 0.7$

'Laws'

- ▶ Hack's law (1957) [6]:

$$l \propto a^h$$

reportedly $0.5 < h < 0.7$

- ▶ Scaling of main stream length with basin size:

$$l \propto L_{||}^d$$

reportedly $1.0 < d < 1.1$

'Laws'

- ▶ Hack's law (1957) [6]:

$$l \propto a^h$$

reportedly $0.5 < h < 0.7$

- ▶ Scaling of main stream length with basin size:

$$l \propto L_{||}^d$$

reportedly $1.0 < d < 1.1$

- ▶ Basin allometry:

$$L_{||} \propto a^{h/d} \equiv a^{1/D}$$

$D < 2 \rightarrow$ basins elongate.

Tokunaga's law

- ▶ Property 1: Scale independence—depends only on difference between orders:

$$T_{\mu,\nu} = T_{\mu-\nu}$$

- ▶ Property 2: Number of side streams grows exponentially with difference in orders:

$$T_{\mu,\nu} = T_1(R_T)^{\mu-\nu-1}$$

- ▶ We usually write Tokunaga's law as:

$$T_k = T_1(R_T)^{k-1} \quad \text{where } R_T \simeq 2$$

$$T_k = T_1 R_T^{k-1}.$$

The story so far:

- ▶ Natural branching networks are **hierarchical**, **self-similar** structures
- ▶ Hierarchy is **mixed**
- ▶ Tokunaga's law describes detailed architecture:
$$T_k = T_1 R_T^{k-1}.$$
- ▶ We have connected Tokunaga's and Horton's laws

The story so far:

- ▶ Natural branching networks are **hierarchical**, **self-similar** structures
- ▶ Hierarchy is **mixed**
- ▶ Tokunaga's law describes detailed architecture:
$$T_k = T_1 R_T^{k-1}.$$
- ▶ We have connected Tokunaga's and Horton's laws
- ▶ Only two Horton laws are independent ($R_n = R_a$)

The story so far:

- ▶ Natural branching networks are **hierarchical**, **self-similar** structures
- ▶ Hierarchy is **mixed**
- ▶ Tokunaga's law describes detailed architecture:
$$T_k = T_1 R_T^{k-1}.$$
- ▶ We have connected Tokunaga's and Horton's laws
- ▶ Only two Horton laws are independent ($R_n = R_a$)
- ▶ Only **two** parameters are **independent**:
 $(T_1, R_T) \Leftrightarrow (R_n, R_s)$

- ▶ Interesting...

Generalizing Horton's laws

Number and area
distributions for the
Scheidegger model
 $P(n_{1,6})$ versus $P(a_6)$.

Generalizing Tokunaga's law

Scheidegger:

- ▶ Observe exponential distributions for $T_{\mu,\nu}$
- ▶ Scaling collapse works using R_s

Generalizing Tokunaga's law

Mississippi:

► Same data collapse for Mississippi...

Generalizing Tokunaga's law

So

$$P(T_{\mu,\nu}) = (R_s)^{\mu-\nu-1} P_t \left[T_{\mu,\nu} / (R_s)^{\mu-\nu-1} \right]$$

where

$$P_t(z) = \frac{1}{\xi_t} e^{-z/\xi_t}.$$

$$P(s_\mu) \Leftrightarrow P(T_{\mu,\nu})$$

- ▶ Exponentials arise from randomness.
- ▶ Look at joint probability $P(s_\mu, T_{\mu,\nu})$.

Generalizing Tokunaga's law

Network architecture:

- ▶ Inter-tributary lengths exponentially distributed
- ▶ Leads to random spatial distribution of stream segments

Generalizing Tokunaga's law

- ▶ Follow stream segments down stream from their beginning
- ▶ Probability (or rate) of an order μ stream segment terminating is **constant**:

$$\tilde{p}_\mu \simeq 1/(R_s)^{\mu-1} \xi_s$$

- ▶ Probability decays exponentially with stream order

Generalizing Tokunaga's law

- ▶ Follow stream segments down stream from their beginning
- ▶ Probability (or rate) of an order μ stream segment terminating is **constant**:

$$\tilde{p}_\mu \simeq 1/(R_s)^{\mu-1} \xi_s$$

- ▶ Probability decays exponentially with stream order
- ▶ Inter-tributary lengths exponentially distributed

Generalizing Tokunaga's law

- ▶ Follow stream segments down stream from their beginning
- ▶ Probability (or rate) of an order μ stream segment terminating is **constant**:

$$\tilde{p}_\mu \simeq 1/(R_s)^{\mu-1} \xi_s$$

- ▶ Probability decays exponentially with stream order
- ▶ Inter-tributary lengths exponentially distributed
- ▶ \Rightarrow random spatial distribution of stream segments

- ▶ Joint distribution for generalized version of Tokunaga's law:

$$P(s_{\mu}, T_{\mu,\nu}) = \tilde{p}_{\mu} \binom{s_{\mu} - 1}{T_{\mu,\nu}} p_{\nu}^{T_{\mu,\nu}} (1 - p_{\nu} - \tilde{p}_{\mu})^{s_{\mu} - T_{\mu,\nu} - 1}$$

where

- ▶ p_{ν} = probability of absorbing an order ν side stream

- ▶ Joint distribution for generalized version of Tokunaga's law:

$$P(s_\mu, T_{\mu,\nu}) = \tilde{p}_\mu \binom{s_\mu - 1}{T_{\mu,\nu}} p_\nu^{T_{\mu,\nu}} (1 - p_\nu - \tilde{p}_\mu)^{s_\mu - T_{\mu,\nu} - 1}$$

where

- ▶ p_ν = probability of absorbing an order ν side stream
- ▶ \tilde{p}_μ = probability of an order μ stream terminating

- ▶ Joint distribution for generalized version of Tokunaga's law:

$$P(s_\mu, T_{\mu,\nu}) = \tilde{p}_\mu \binom{s_\mu - 1}{T_{\mu,\nu}} p_\nu^{T_{\mu,\nu}} (1 - p_\nu - \tilde{p}_\mu)^{s_\mu - T_{\mu,\nu} - 1}$$

where

- ▶ p_ν = probability of absorbing an order ν side stream
- ▶ \tilde{p}_μ = probability of an order μ stream terminating
- ▶ Approximation: depends on distance units of s_μ
- ▶ In each unit of distance along stream, there is one chance of a side stream entering or the stream terminating.

- ▶ Now deal with thing:

$$P(s_\mu, T_{\mu,\nu}) = \tilde{p}_\mu \binom{s_\mu - 1}{T_{\mu,\nu}} p_\nu^{T_{\mu,\nu}} (1 - p_\nu - \tilde{p}_\mu)^{s_\mu - T_{\mu,\nu} - 1}$$

Generalizing Tokunaga's law

- ▶ Now deal with thing:

$$P(s_\mu, T_{\mu,\nu}) = \tilde{p}_\mu \binom{s_\mu - 1}{T_{\mu,\nu}} p_\nu^{T_{\mu,\nu}} (1 - p_\nu - \tilde{p}_\mu)^{s_\mu - T_{\mu,\nu} - 1}$$

- ▶ Set $(x, y) = (s_\mu, T_{\mu,\nu})$ and $q = 1 - p_\nu - \tilde{p}_\mu$, approximate liberally.

Generalizing Tokunaga's law

- ▶ Now deal with thing:

$$P(s_\mu, T_{\mu,\nu}) = \tilde{p}_\mu \binom{s_\mu - 1}{T_{\mu,\nu}} p_\nu^{T_{\mu,\nu}} (1 - p_\nu - \tilde{p}_\mu)^{s_\mu - T_{\mu,\nu} - 1}$$

- ▶ Set $(x, y) = (s_\mu, T_{\mu,\nu})$ and $q = 1 - p_\nu - \tilde{p}_\mu$, approximate liberally.

- ▶ Obtain

$$P(x, y) = Nx^{-1/2} [F(y/x)]^x$$

where

$$F(v) = \left(\frac{1-v}{q}\right)^{-(1-v)} \left(\frac{v}{p}\right)^{-v}.$$

Generalizing Tokunaga's law

- ▶ Checking form of $P(s_\mu, T_{\mu,\nu})$ works:

Scheidegger:

Generalizing Tokunaga's law

Summary of universality classes:

network	h	d
Non-convergent flow	1	1
Directed random	2/3	1
Undirected random	5/8	5/4
Self-similar	1/2	1
OCN's (I)	1/2	1
OCN's (II)	2/3	1
OCN's (III)	3/5	1
Real rivers	0.5–0.7	1.0–1.2

$$h \Rightarrow \ell \propto a^h \text{ (Hack's law).}$$

$$d \Rightarrow \ell \propto L_{||}^d \text{ (stream self-affinity).}$$
