AUDIENCE SCORE
250,000+ Ratings

“Generally favorable” according to metacritic:

60 to 90 

End points:

 A 90 rating  on Metacritic from the Washington Post:
“With a script as beautifully complex as this one, Ramis and his cast have half of their work done for them. There is a moral to the tale as well, and it even strikes an uplifting note. But, for once, the audience isn’t forced to surrender its intelligence (or its healthy cynicism) to embrace the film’s sunny resolution.”

End points:

 A 90 rating  on Metacritic from the Washington Post:
“With a script as beautifully complex as this one, Ramis and his cast have half of their work done for them. There is a moral to the tale as well, and it even strikes an uplifting note. But, for once, the audience isn’t forced to surrender its intelligence (or its healthy cynicism) to embrace the film’s sunny resolution.”

 A 60 rating  on Metacritic, somehow also from the Washington Post:
“The trouble is, you’ll feel like you’ve been through too many same days yourself. With its zany daily episodes,
“Groundhog” gets stuck in a non-progressive repetition.’

Living in the Big Tick Tock:

Predictable photon delivery:

 Solstice  = “Sun + stand still”

Cherry blossoms: The 12 hundred year data set

 WaPo, 2017: Japan's cherry blossoms signal warmest climate in more than 1,000 years 

 WaPo, 2021: Japan's Kyoto cherry blossoms peak on earliest date in 1,200 years, a sign of climate change 

 Data:
<http://atmenv.envi.osakafu-u.ac.jp/aono/kyophenotemp4/>

First leaves:

Finding the same trend towards earlier seasons, but detected using a different method—the date of first leaves in spring—and across the entire northern hemisphere:

“Onset of spring starting earlier across the Northern Hemisphere” 

Schwartz, Ahas, and Aasa,
Global Change Biology, **12**, 343–351, 2006. ^[2]

From found 2009 notes:

- ☼ Frigistic (winter) and Thermistic (summer)
- ☼ Conflation of measurable with important (delicate) Importance of statistical measurements. Appreciation of randomness, good to encode. The teletherm. Solstice.
- ☼ I propose that the statistically coldest and warmest days of the year be known as the teletherms, and that these days should be recognized. The word teletherm derives from the Greek roots for end or terminal (telos-) and heat (-therm), in analogy with solstice (Latin for sun-stop). The hibernal teletherm falls roughly on January 31, and the esteval teletherm on July 31.
- ☼ The solstices and equinoxes have been celebrated by human civilizations for thousands of years, and their measurement
- ☼ Equitherms.
- ☼ Groundhog day!!! February 3
- ☼ July 17 (July 16 in a Leap Year)
- ☼ January 25 = day when 50% of years have experience their coldest day for the winter.
- ☼ thermological winter
- ☼ Imbolc one of the cross-quarter days, halfway between the winter solstice and the vernal equinox
- ☼ Candlemas
