Money quote from George Cobb's review of Strang's book:

Do you want a book written by a mathematician with a lifetime experience using linear algebra to understand important, authentic, applied problems, a former president of the Society for Industrial and Applied Mathematics, ...

or do you want a book shaped mainly by the [a]esthetics of pure mathematicians with only a weak, theoretical connection to how linear algebra is used in the natural and social sciences?

- ▶ George Cobb: Robert L. Rooke Professor of Mathematics and Statistics, Mount Holyoke College

Gil Strang, Exalted Friend of the Matrix:

- Professor of Mathematics at MIT since 1962.

These are 121 cupcakes with my favorite $-1, 2, -1$ matrix. It was the day before Thanksgiving and two days before my birthday. A happy surprise.

- Many awards including MAA Haimo Award [↗](#) for Distinguished College or University Teaching of Mathematics
- Rhodes Scholar.
- Legend.

- More on Laplacian matrices, graphs, and other madnesses here [↗](#).
- (Strang's Wikipedia page is here [↗](#)).

Introduction

Exciting Admin

Importance

Usages

Key problems

Three ways of looking...

Colbert on Equations

References

1. Levels (40%)

- ▶ Ten one-week assignments.
- ▶ Lowest assignment score will be dropped.
- ▶ The last assignment cannot be dropped!
- ▶ Each assignment will have a random bonus point question which has nothing to do with linear algebra.

2. Challenge Levels (35%)

- ▶ Three 75 minutes tests distributed throughout the course, all of equal weighting.

3. Final Boss Level (25%)

- ▶ \leq Three hours of joyful celebration.
- ▶ Monday, May 4, 1:30 pm to 4:15 pm, in Angell B112.

$$\begin{bmatrix} I & \heartsuit \\ N & (A^T) \end{bmatrix}$$

Grading breakdown:

4. **Homework (0%)**—Problems assigned online from the textbook. Doing these exercises will be most beneficial and will increase happiness.
5. **General existence**—it is extremely desirable that students attend class, and class presence will be taken into account if a grade is borderline.

Questions are worth 3 points according to the following scale:

- ▶ 3 = correct or very nearly so.
- ▶ 2 = acceptable but needs some revisions.
- ▶ 1 = needs major revisions.
- ▶ 0 = way off.

Schedule: The course will mainly cover chapters 2 through 6 of the textbook. (You should know all about Chapter 1.)

Week # (dates)	Tuesday	Thursday
1 (1/13 and 1/15)	$A\vec{x} = \vec{b}$	$A\vec{x} = \vec{b}$ + Level 1
2 (1/20 and 1/22)	$A\vec{x} = \vec{b}$	$A\vec{x} = \vec{b}$ + Level 2
3 (1/27 and 1/29)	$A\vec{x} = \vec{b}$	$A\vec{x} = \vec{b}$ + Level 3
4 (2/3 and 2/5)	$A\vec{x} = \vec{b}$ and review	<i>Challenge Level 1</i>
5 (2/10 and 2/12)	Big picture	Big picture + Level 4
6 (2/17 and 2/19)	Big picture	Big picture + Level 5
7 (2/24 and 2/26)	Big picture	Big picture + Level 6
– (3/3 and 3/5)	Spring recess	Spring recess
8 (3/10 and 3/12)	Big picture and re-view	<i>Challenge Level 2</i>
9 (3/17 and 3/19)	Eigenstuff	Eigenstuff + Level 7
10 (3/24 and 3/26)	Eigenstuff	Eigenstuff + Level 8
11 (3/31 and 4/2)	Eigenstuff	Eigenstuff + Level 9
12 (4/7 and 4/9)	Eigenstuff and re-view	<i>Challenge Level 3</i>
13 (4/14 and 4/16)	SVD + Level 10	SVD
14 (4/21 and 4/13)	SVD	SVD
15 (4/28)	SVD	—

Important dates:

1. Classes run from Monday, January 12 to Wednesday, April 29.
2. Add/Drop, Audit, Pass/No Pass deadline—Monday, January 26.
3. Last day to withdraw—Monday, March 27.
4. Reading and Exam period—Thursday, April 30 to Friday, May 8.

More stuff:

Do check your zoo account for updates regarding the course.

Academic assistance: Anyone who requires assistance in any way (as per the ACCESS program or due to athletic endeavors), please see or contact me as soon as possible.

THE UNIVERSITY
OF VERMONT

More stuff:

Being good people:

1. In class there will be no electronic gadgetry, no cell phones, no beeping, no text messaging, etc. You really just need your brain, some paper, and a writing implement here (okay, and Matlab).
2. Second, I encourage you to email me questions, ideas, comments, etc., about the class but request that you please do so in a respectful fashion.
3. Finally, as in all UVM classes, Academic honesty will be expected and departures will be dealt with appropriately. See <http://www.uvm.edu/cses/> for guidelines.

$$\begin{bmatrix} I \heartsuit \\ N(A^T) \end{bmatrix}$$

Even more stuff:

Late policy: Unless in the case of an emergency (a real one) or if an absence has been predeclared and a make-up version sorted out, assignments that are not turned in on time or tests that are not attended will be given 0%.

Computing: Approximately 2 out of 10 questions per assignment will be Matlab based.

Note: for assignment problems, written details of calculations will be required.

$$\begin{bmatrix} I \heartsuit \\ N(A^T) \end{bmatrix}$$

Why are we doing this?

Episode 1/26:

Key problems

Three ways of looking...

Colbert on Equations

References

Many things are discrete:

- ▶ Information (0's & 1's, letters, words)
- ▶ People (sociology)
- ▶ Networks (the Web, people again, food webs, ...)
- ▶ Sounds (musical notes)

Even more:

If real data is continuous, we almost always discretize it (0's and 1's)

$$\begin{bmatrix} I \\ \text{♥} \\ N(A^T) \end{bmatrix}$$

Why are we doing this?

Big deal: **Linear Algebra** is a body of mathematics that deals with **discrete problems**.

Many things are discrete:

The Actual Truth:

Matrices as gadgets:

Episode 1/26:

Introduction

A matrix A transforms a vector \vec{x} into a new vector \vec{x}' through matrix multiplication (whatever that is):

$$\vec{x}' = A \vec{x}$$

We can use matrices to:

- ▶ Grow vectors
- ▶ Shrink vectors
- ▶ Rotate vectors
- ▶ Flip vectors
- ▶ Do all these things in different directions
- ▶ Reveal the true ur-dystopian reality.

► It's all connected. "More later."

Three key problems of Linear Algebra

Episode 1/26:

Introduction

1. Given a matrix A and a vector \vec{b} , find \vec{x} such that

$$A\vec{x} = \vec{b}.$$

2. Eigenvalue problem: Given A , find λ and \vec{v} such that

$$A\vec{v} = \lambda\vec{v}.$$

3. Coupled linear differential equations:

$$\frac{d}{dt}y(t) = Ay(t)$$

► Our focus will be largely on #1, partly on #2.

Row Picture—what we are doing:

- ▶ (a) Finding intersection of two lines
- ▶ (b) Finding the values of x_1 and x_2 for which both equations are satisfied (true/happy)
- ▶ A splendid and deep connection:
(a) Geometry \Leftrightarrow (b) Algebra

Three possible kinds of solution:

1. Lines intersect at one point
2. Lines are parallel and disjoint
3. Lines are the same
