# Limits to what's possible:

## Universality

-  The property that the macroscopic aspects of a system do not depend sensitively on the system's details.
-  Key figure: [Leo Kadanoff](#) 
-  Kadanoff's retrospective: "Innovations in Statistics Physics" <sup>[3]</sup>

## Universality

## Examples:

-  The Central Limit Theorem:

$$P(x; \mu, \sigma) dx = \frac{1}{\sqrt{2\pi}\sigma} e^{-(x-\mu)^2/2\sigma^2} dx .$$

-  Navier Stokes equation for fluids.
-  Nature of phase transitions in statistical mechanics.

# Universality

-  Sometimes **details don't matter too much.**
-  Many-to-one mapping from micro to macro
-  Suggests not all possible behaviors are available at higher levels of complexity.
-  Universality means some things are fated.

## Large questions:

-  How universal is universality?
-  What are the possible long-time states (attractors) for a universe?

Universality

- 🧱 Fluid mechanics = One of the great successes of understanding complex systems.
- 🧱 Navier-Stokes equations: micro-macro system evolution.
- 🧱 The big three: Experiment + Theory + Simulations.
- 🧱 Works for many very different 'fluids':
  - 🧱 the atmosphere,
  - 🧱 oceans,
  - 🧱 blood,
  - 🧱 the earth's mantle,
  - 🧱 galaxies, ...
  - 🧱 **and ball bearings on lattices ...?**

Symmetry  
Breaking

The Big Theory

Final words

For your  
consideration

References

Lattice matters ...

No 'good' lattice in 3-d.

Upshot: play with 'particles' of a system to obtain new or specific macro behaviours.

# The absolute basics:

## Modern basic science in three steps:

1. Find interesting/meaningful/important phenomena, optionally involving spectacular amounts of data.
2. Describe what you see.
3. Explain it.

**Unlocks our (limited) ability to:** Create, predict, and control.

And be good people: **Share.**

**Beware your assumptions:** Don't use tools/models because they're there, or because everyone else does ...
