## Advances in sociotechnical algorithms:

"Mastering the game of Go with deep neural networks and tree search"  
Silver and Silver,  
Nature, **529**, 484–489, 2016. [6]

Figure 3 | Monte Carlo tree search in AlphaGo. a. Each simulation traverses the tree by selecting the edge with maximum action value  $Q$ , plus a bonus  $u(P)$  that depends on a stored prior probability  $P$  for that edge. b. The leaf node may be expanded, the new node is processed once by the policy network  $p$ , and the output probabilities are stored as prior probabilities  $P$  for each action. c. At the end of a simulation, the leaf node

is evaluated in two ways: using the value network  $v_0$  and by running a rollout to the end of the game with the fast rollout policy  $p_0$ ; then computing the winner with function  $r$ . d. Action values  $Q$  are updated to track the mean value of all evaluations  $v(\cdot)$  and  $v_0(\cdot)$  in the subtree below that action.

## Applied knot theory:

$h$	$\gamma$	$\gamma/h$	$K(h, \gamma)$	$s$	$b$	Name	Sequence
3	1	0.33	1	0	0		$L_3 R_3 C_3 T$
4	1	0.25	1	-1	1	Four-in-hand	$L_4 R_4 L_4 C_4 T$
5	2	0.40	2	-1	0	Pratt knot	$L_5 C_5 R_5 L_5 C_5 T$
7	2	0.29	6	-1	1		$L_7 R_7 L_7 C_7 R_7 L_7 C_7 T$
7	3	0.43	4	0	1		$L_7 C_7 R_7 C_7 L_7 R_7 C_7 T$
8	2	0.25	8	0	2		$L_8 R_8 L_8 C_8 L_8 R_8 C_8 T$
8	3	0.38	12	-1	0	Windsor	$L_8 C_8 R_8 L_8 C_8 R_8 L_8 C_8 T$
9	3	0.33	24	0	0		$L_9 C_9 L_9 R_9 C_9 L_9 R_9 C_9 T$
9	4	0.44	8	-1	2		$L_9 C_9 R_9 C_9 L_9 C_9 R_9 L_9 C_9 T$

Knots are characterized by half-winding number  $h$ , centre number  $\gamma$ , centre fraction  $\gamma/h$ , knots per class  $K(h, \gamma)$ , symmetry  $s$ , balance  $b$ , name and sequence.

- $h$  = number of moves
- $\gamma$  = number of center moves
- $K(h, \gamma) = 2^{\gamma-1} \binom{h-\gamma-2}{\gamma-1}$
- $s = \sum_{i=1}^h x_i$  where  $x = -1$  for  $L$  and  $+1$  for  $R$ .
- $b = \frac{1}{2} \sum_{i=2}^{h-1} |\omega_i + \omega_{i-1}|$  where  $\omega = \pm 1$  represents winding direction.

## Applied knot theory:

"Designing tie knots by random walks"

Fink and Mao,  
Nature, **398**, 31-32, 1999. [1]

Figure 1 All diagrams are drawn in the frame of reference of the mirror image of the actual tie.  
a. The two ways of beginning a knot,  $L_0$  and  $L_0$ . For knots beginning with  $L_0$ , the tie must begin inside-out. b. The four-in-hand, denoted by the sequence  $L_4 R_4 L_4 C_4 T$ . c. A knot may be represented by a persistent random walk on a triangular lattice. The example shown is the four-in-hand, indicated by the walk  $1114$ .

# Irregular verbs

Table 1 | The 177 irregular verbs studied

Frequency	Verbs	Regularization (%)	Half-life (yr)
10 <sup>-1</sup> -1	be, have	0	38,800
10 <sup>-2</sup> -10 <sup>-1</sup>	begin, break, bring, buy, choose, draw, drink, drive, eat, fall, fight, forget, grow, hang, help, hold, leave, let, lie, lose, reach, rise, run, seek, set, shake, sit, sleep, speak, stand, teach, throw, understand, walk, win, work, write	10	14,400
10 <sup>-3</sup> -10 <sup>-2</sup>	arise, bake, bear, beat, bind, bite, blow, boil, burn, burst, carve, chew, climb, cling, creep, dare, die, drag, flee, float, flow, fly, fold, freeze, grind, leap, lend, lock, melt, reckon, ride, rush, shape, shine, shoot, shrink, sigh, sing, sink, slide, slip, smoke, spin, spring, stare, steal, step, stretch, strike, stroke, suck, swallow, swear, sweep, swim, swing, tear, wake, wash, weave, weep, weigh, wind, yst, yield	43	2,000
10 <sup>-4</sup> -10 <sup>-3</sup>	bark, bellow, bid, blend, brand, brew, chieve, cringe, crow, dive, drip, fare, fret, glide, gnaw, grip, heave, knead, low, milk, mourn, mow, prescribe, redder, reek, row, scrape, soothe, these, shed, show, slay, salt, smite, sow, spar, spurn, sting, stink, straw, stride, swell, tread, uproot, wade, warp, wax, wield, wing, writes	72	700
10 <sup>-5</sup> -10 <sup>-4</sup>	bide, chide, delve, fly, hay, haul, run, strive, sink, snip, spew, sup, wreak	91	300

177 Old English irregular verbs were compiled for this study. These are arranged according to frequency bin, and in alphabetical order within each bin. Also shown is the percentage of verbs in each bin that have regularized. The half-life is shown in years. Verbs that have regularized are indicated in red. As we move down the list, an increasingly large fraction of the verbs are red; the frequency-dependent regularization of irregular verbs becomes immediately apparent.

- Red = regularized
- Estimates of half-life for regularization ( $\propto f^{1/2}$ )

# Personality distributions:

"A Theory of the Emergence, Persistence, and Expression of Geographic Variation in Psychological Characteristics" Rentfrow, Gosling, and Potter, Perspectives on Psychological Science, 3, 339-369, 2008. [5]

Five Factor Model (FFM):

- Extraversion [E]
- Agreeableness [A]
- Conscientiousness [C]
- Neuroticism [N]
- Openness [O]

"...a robust and widely accepted framework for conceptualizing the structure of personality... Although the FFM is not universally accepted in the field..." [5]

A concern: self-reported data.

- Works for Gregorian (1582-, haphazardly) and the increasingly inaccurate Julian calendars (400 and 28 years cycles).
- Apparently inspired by Lewis Carroll's work on a perpetual calendar.

Outline:

- Determine "anchor day" for a given century, then find Doomsday for a given year in that century.
- Remember special Doomsday dates and work from there.
- Naturally: Load this year's Doomsday into brain.

Century's anchor day (Gregorian, Sunday ≡ 0):

$$5 \times \left( \left\lfloor \frac{YYYY}{100} \right\rfloor \bmod 4 \right) \bmod 7 + \text{Tuesday}$$

Offset:

$$\left( 365YY + \left\lfloor \frac{YY}{4} \right\rfloor \right) \bmod 7 = \left( YY + \left\lfloor \frac{YY}{4} \right\rfloor \right) \bmod 7$$

Memorable Doomsdays:

Month	Memorable date	Month/Day	Mnemonic
January	January 3 (common years), January 4 (leap years)	1/3 or 1/4	the 3rd 3 years in 4 and the 4th in the 4th
February	February 28 (common years), February 29 (leap years)	2/28 or 2/29	last day of February
March	"March 0"	3/0	last day of February
April	April 4	4/4	4/4, 6/6, 8/8, 10/10, 12/12
May	May 9	5/9	9-10-5 at 7-11
June	June 6	6/6	4/4, 6/6, 8/8, 10/10, 12/12
July	July 11	7/11	9-10-5 at 7-11
August	August 8	8/8	4/4, 6/6, 8/8, 10/10, 12/12
September	September 5	9/5	9-10-5 at 7-11
October	October 10	10/10	4/4, 6/6, 8/8, 10/10, 12/12
November	November 7	11/7	9-10-5 at 7-11
December	December 12	12/12	4/4, 6/6, 8/8, 10/10, 12/12

- Pi day (March 14), July 4, Halloween, and Boxing Day are always Doomsdays.

The bissextile year

"The Julian calendar, which was developed in 46 BC by Julius Caesar, and became effective in 45 BC, distributed an extra ten days among the months of the Roman Republican calendar. Caesar also replaced the intercalary month by a single intercalary day, located where the intercalary month used to be. To create the intercalary day, the existing ante diem sextum Kalendas Martias (February 24) was doubled, producing ante diem bis sextum Kalendas Martias. Hence, the year containing the doubled day was a bissextile (bis sextum, "twice sixth") year. For legal purposes, the two days of the bis sextum were considered to be a single day, with the second half being intercalated; but in common practice by 238, when Censorinus wrote, the intercalary day was followed by the last five days of February, a. d. VI, V, IV, III and pridie Kal. Mart. (the days numbered 24, 25, 26, 27, and 28 from the beginning of February in a common year), so that the intercalated day was the first half of the doubled day. Thus the intercalated day was effectively inserted between the 23rd and 24th days of February."

- ☁  $n$  is superabundant if:

$$\frac{\sigma_1(n)}{n} > \frac{\sigma_1(j)}{j}$$

for  $j < n$  and where  $\sigma_x(n) = \sum_{d|n} d^x$  is the divisor function.

- ☁ 449 numbers are both superabundant and highly composite.

# Some very, very silly units of measurement courtesy of the Imperial system [↗](#):

- ☁ 22 yards in a chain = 1 cricket pitch, 100 links in a chain, 10 chains in a furlong, 80 chains in a mile.
- ☁ 1 acre = 1 furlong × 1 chain = 43,560 square feet.
- ☁ 160 fluid ounces in a gallon.
- ☁ 14 pounds in a stone.
- ☁ Hundredweight = 112 pounds.

Also:

- ☁ Fahrenheit, Celcius, and Kelvin.
- ☁ The entire metric system.
