The meaning of meaning:

“Ousiometrics and Telegnomics: The essence of meaning conforms to a two-dimensional powerful-weak and dangerous-safe framework with diverse corpora presenting a safety bias”
Dodds et al.,
, 2021. [?]

What does meaning even mean?

- From the smack-tweeting Merriam-Webster:¹ “The thing that is conveyed especially by language”
- What are the essential characteristics of meaning?
- Does essential meaning meaningfully span some kind of space?

¹Life goal: Never get owned by a dictionary on social media

This is not easy:

“Abed’s Uncontrollable Christmas”

- Abed searches for the meaning of Christmas (in stop animation)
- Abed Nadir: [opens present] “It’s the first season of Lost on DVD.”
- Pierce Hawthorne: “That’s the meaning of Christmas?”
- Abed Nadir: “It’s a metaphor. It represents lack of payoff.”

“Introduction to Teaching”

Abed Nadir: “I thought the meaning of people was somewhere in here. Then I looked inside Nicolas Cage and I found a secret—people are random and pointless.”

The meaning of pings:

“A factorial study of complex auditory stimuli (passive sonar sounds)”
L. M. Solomon,
Unpublished doctoral dissertation, University of Illinois, , ,
1954. [?]

From the introduction:

This study represents the convergence of three disparate areas of investigation in an attempt to analyze one of the many problems encountered in the study of human factors in undersea warfare. The domains referred to are these:

- naval sonar,
- the nature of “meaning,”
- and multidimensional scaling techniques.

The problem may be stated as follows: In the detection and recognition of underwater sounds by the use of sonar equipment, what are the discriminative cues employed by the sonar operator? More generally, what factors does the operator utilize in decoding the significance of sonar signals?

From pings to things:

“The Measurement of Meaning”
by Osgood, Suci, and Tannenbaum (1957). [?]

- Osgood et al. used **semantic differentials** and **factor analysis** to identify a basis of three variables for meaning-space:
 - Evaluation:** {bad ↔ good}
 - Potency:** {weak ↔ strong}
 - Activity:** {weak ↔ strong}
- 100s of students, 10s of things, 50 semantic differentials
- “EPA framework”

Semantic differentials from Osgood et al.: [?]

1. pleasant-unpleasant	18. large-small	36. colorful-colorless
2. repeated-varied	19. clean-dirty	37. hot-cold
3. smooth-rough	20. resting-busy	38. rich-thin
4. active-passive	21. dull-sharp	39. obvious-subtle
5. beautiful-ugly	22. deep-shallow	40. wide-narrow
6. definite-uncertain	23. gliding-scraping	41. deliberate-careless
7. low-high	24. familiar-strange	42. happy-sad
8. powerful-weak	25. soft-hard	43. gentle-violent
9. steady-fluttering	26. heavy-light	44. mild-intense
10. soft-loud	27. wet-dry	45. rounded-angular
11. full-empty	28. safe-dangerous	46. slow-fast
12. good-bad	29. concentrated-diffuse	47. rugged-delicate
13. rumbling-whining	30. pushing-pulling	48. simple-complex
14. solid-hollow	31. labored-easy	49. green-red
15. clear-hazy	32. dark-bright	50. masculine-feminine
16. calming-exciting	33. even-uneven	
17. pleasing-annoying	34. loose-tight	
	35. relaxed-tense	

Definitions:

- Ousiometrics:** The quantitative study of the **essential meaningful components** of an entity, however perceived.
- Used in philosophical and theological settings, the word ‘ousia’ comes from Ancient Greek οὐσία.
- To be distinguished from semantics, semiotics, ...
- οὐσία is the etymological root of the word ‘essence’.
- Ousiometry, ousiometer, ousiograms, ...
- Telegnomics: The distant sensing of knowledge (~ distant reading [?])

Essential dimensions captured by emotion:

- Late 1800s: Three dimensional representation of emotion postulated by Wendt. [?, ?]
- 1970s: Mehrabian and Russell explicitly port EPA framework: [?, ?]
 - Evaluation ~ Pleasure/Valence (~ Happiness)
 - Potency ~ Dominance
 - Activity ~ Arousal
- VAD has become standard nomenclature even though emotion is less general than meaning.
- Explicit presumption of independence of VAD dimensions, has hardened as fact.
- Intention that VAD ≡ EPA has become lost in literature. [?]

ANEW study: Valence ~ Happiness:

- Valence scale presented to participants as a 'happy-unhappy scale.'
- Participants were further told: "At one extreme of this scale, you are happy, pleased, satisfied, contented, hopeful. ... The other end of the scale is when you feel completely unhappy, annoyed, unsatisfied, melancholic, despaired, or bored."
- The Hedonometer was always about essential meaning.

We now know that ANEW is a no-no:

- Problem: Expert-chosen list of ~ 1,000 words.
- Fine words but poorly cover real texts [?].
- Wrongly suggests Arousal and Dominance are minimal relative to Valence.

Remeasuring meaning:

"Obtaining Reliable human ratings of valence, arousal, and dominance for 20,000 English words" Saif M. Mohammad, Proceedings of The Annual Conference of the Association for Computational Linguistics (ACL), **38**, 2018. [?]

Moving beyond Likert scales:

- Best-worst scaling
- Ask raters to examine n things once, and choose the best and worst according to some criterion.
- For $n = 4$, there are 6 pair comparisons of Things.
- Choosing best and worst gives 5 orderings: $\tau_1 > \tau_2, \tau_3 > \tau_4$.
- Things end up with scores in $[0, 1]$.

NRC VAD Lexicon [?]

VAD endpoints:	Paradigm words and phrases presented to raters: [?]
highest valence	happiness, pleasure, positiveness, satisfaction, contentedness, hopefulness
lowest valence	unhappiness, annoyance, negativness, dissatisfaction, melancholy, despair
highest arousal	arousal, activeness, stimulation, frenzy, jitteriness, alertness
lowest arousal	unarousal, passiveness, relaxation, calmness, sluggishness, dullness, sleepiness
highest dominance	dominant, in control of the situation, powerful, influential, important, autonomous
lowest dominance	submissive, controlled by outside factors, weak, influenced, cared-for, guided

Major problem 5: Imposing dimensions through clouds of endpoint descriptors.

NRC VAD study: 20,007 words:

Standard correlations suggests a bit of Barney Rubble:

$$R(V, A) \approx -0.268$$

$$R(A, D) \approx 0.302$$

$$R(D, V) \approx 0.488$$

The Delicious English Muffin of Meaning:¹

¹Apricot jam, always.

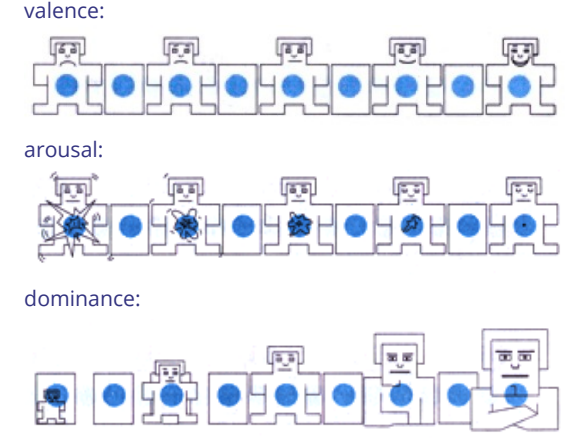

$$R(D, V) \approx 0.488$$

Major problems with measuring essential meaning:

- Scale:** Originally 10s and 100s of words → now 10,000s + online rating.
- The focus on types alone and not tokens:** Missing the forest for the book of tree species.
- The use of Likert scales for semantic differentials:** Solid but can be improved upon.
- Limitations of factor analysis for a large number of categorical dimensions:** Ousiograms will help sort things out.
- The misalignment between expert-chosen, end-point descriptors and dimensions of essential meaning:** How to guide raters to score VAD dimensions?
Solution is to always perform factor analysis (SVD).

1999 ANEW study—three 1-9 scales: [?]

Release the Hounds by which we mean Singular Value Decomposition:

Variance explained:

- VAD: 44.4%, 28.0%, and 27.6%
- Apply SVD.
- Singular values: $\sigma_1 \approx 34.1$, $\sigma_2 \approx 27.2$, and $\sigma_3 \approx 13.8$,
- For what will be Goodness-Energy-Structure (GES): 55.6%, 35.3%, and 9.1%
- Rotate in G-E plane by $\pi/4$ for what will be Power-Danger-Structure (PDS) 45.5%, 45.5%, 9.1%
- Interpretability enhancements: Ousiograms.

Etymological, taxonomic, and nomenclatural maddness:

- Physics: Power was once sometimes called Activity
- Danger and Dominance trace back to Dominus (~ lord/ruler/person of power)
- Framing words for EPA, VAD, etc., matter greatly.

Other descriptors that don't hold up:

- Success-Stress-Structure.
- Energy/Flourishing/Thriving-Threat
- Power-Order/Chaos-Gravity/Seriousness

After much staring at the ceiling:

- Goodness-Energy-Structure (GES) (still fails)
- Power-Danger-Structure (PDS) (succeeds)

A special thing has happened:

- The PDS framework emerged only from analyzing a lexicon (types).
- Applying PDS framework to disparate corpora (tokens) reveals a linguistic 'safety bias'.

Use the slider to indicate where you fall on this spectrum:

Statistical "Which Character" Personality Quiz

This is an interactive personality quiz that will match you to fictional characters on similarity of description.

Background

When the creator of this website would let people that he published posts, people would usually ask him if he meant that he worked at BuzzFeed on their "Who personality quiz". And he would have to explain that he did not and had never been that type of fan. These quizzes are very fun, as evidenced by their extremely popular meaningful, two people who get the same result on a typical example of these tests much more in common than two randomly paired individuals. So for the longest time one character match personality quiz, but I guess it was inevitable because here is more scientific, but still fun, "Which Character Are You?" test.

This test was created by getting more than 3 million volunteers to rate different adjective based scales. This created a database of descriptive ratings are compared against these profiles and the closest match of if this quiz works and was developed can be found here: There is also a the bases of self-reports, and a glossary for context.

Test instructions

The test is made of pairs of adjectives with a slider between them. For each pair, dragging the slider to where you fall on the spectrum between them. This test is called how many questions you want to do using the version option. The media recommended version is 185 seconds (~3 minutes).

Participation

This interactive program is provided for entertainment and informal psychological advice or a screening tool of any kind and comes without particular purpose.

At the end of the survey you will be asked for consent to include your responses in our database and to be used and shared per the website privacy policy.

Begin assessment

juvenile (50%) mature (50%)

frugal (23%) lavish (77%)

social (81%) reclusive (19%)

adventurous (76%) stick-in-the-mud (24%)

haunted (100%) blissful (0%)

orderly (23%) chaotic (77%)

The best match between the self assessment you provided and the profile of a fictional character as rated by other people who have taken this survey is the character Elizabeth Swann (Pirates of the Caribbean).

83% match

Your traits versus their traits are graphed below (click on points for labels).

Findings, observations, possibilities:

- Power-danger-structure framework emerges in distinct settings, fitting types and tokens.
- Safety bias of communication refines Pollyanna Principle of positivity
- Happiness/Goodness = Power + Safety
- Ousimeter can be improved and refined.
- Possible: Emotions map onto powerful-safe and danger axes.
- Power-danger framework for survival.
- Possible: Telegnomics for stories—Measuring character arcs, plots.
- Complement to information theory which is meaning-free. [?]

See concluding remarks in the foundational paper. [?]
