George Kingsley Zipf:

PoCS
@pocsvox

Data from our
man Zipf

In brief:

-  [Zipf](#) (1902–1950) was a linguist at Harvard, specializing in Chinese languages.
-  Unusual passion for statistical analysis of texts.
-  Studied human behavior much more generally ...

[Zipf in brief](#)

[Zipfian empirics](#)

[Yet more Zipfian
Empirics](#)

[References](#)

Zipf's masterwork:

-  "Human Behavior and the Principle of Least Effort"
Addison-Wesley, 1949

 Bonus 'word' word: [Glossolalia](#).

Human Behavior/Principle of Least Effort:

PoCS
@pocsvox

Data from our
man Zipf

From the Preface—

Nearly twenty-five years ago it occurred to me that we might gain considerable insight into the mainsprings of human behavior if we viewed it purely as a natural phenomenon like everything else in the universe, ...

And—

... the expressed purpose of this book is to establish **The Principle of Least Effort** as the primary principle that governs our entire individual and collective behavior ...

[Zipf in brief](#)

The Principle of Least Effort:

PoCS
@pocsvox

Data from our
man Zipf

Zipf's framing (p. 1):

"... a person in solving his immediate problems will view these against the background of his probable future problems *as estimated by himself.*"

"... he will strive ... to minimize the *total work* that he must expend in solving *both* his immediate problems *and* his probable future problems."

"[he will strive to] minimize the *probable average rate of his work-expenditure...*"

Rampaging research

Within Human Behavior and the Principle of Least Effort:

-  City sizes
-  # retail stores in cities
-  # services (barber shops, beauty parlors, cleaning, ...)
-  # people in occupations
-  # one-way trips in cars and trucks vs. distance
-  # new items by dateline
-  weight moved between cities by rail
-  # telephone messages between cities
-  # people moving vs. distance
-  # marriages vs. distance

 Observed **general dependency** of 'interactions' between **cities A and B** on $P_A P_B / D_{AB}$ where P_A and P_B are population size and D_{AB} is distance between A and B. \Rightarrow 'Gravity Law.'

Zipfian empirics:

 vocabulary balance: $f \sim r^{-1} \rightarrow r \cdot f \sim \text{constant}$
(f = frequency, r = rank).

 $f \sim r^{-1}$ for word frequency:

Zipf in brief

Zipfian empirics

Yet more Zipfian
Empirics

References

Zipf's basic idea:

Forces of Unification and Diversification:

- 🧱 Easiest for the speaker to use just one word.
 - 🧱 **Encoding is simple** but **decoding is hard**
- 🧱 Zipf uses the analogy of tools: **one tool for all tasks**.

- 🧱 Optimal for listener if all pieces of information correspond to different words (or morphemes).
- 🧱 Analogy: a specialized tool for every task.
 - 🧱 **Decoding is simple** but **encoding is hard**

- 🧱 Zipf thereby argues for a tension that should lead to an uneven distribution of word usage.
- 🧱 No formal theory beyond this... (more later ^[1])

Comment #60 in Math and the City by Strogatz, NYT:

60. May 20, 2009

9:26 am

[Link](#)

George Kingsley Zipf was my teacher at Harvard...He had given a class project where we were to see if Chemical Companies when ranked by the number of different chemicals they produced, followed his Law of Least Effort. I missed turning in my assignment due to the accidental death of my father....When I returned from the funeral I was given a message to call Dr. Zipf immediately. I did and when I explained why I was late turning in the data. He said, "Well, your father's gone and I (Zipf) have no pipeline to God. I expect the data will be on my desk tomorrow morning!"My mother, sister and extended family spread huge books of trade magazines on the kitchen and dining room tables and furiously went to work....We worked until late in the night and finished the project....I drove to Harvard the next morning and angrily gave the hundreds of 'three by five cards' to Zipf. All he said was, "Thank you." Years later, I wondered whether his 'meanness' had really been his way of helping me and my family to take our minds off our grief that day and concentrate on finishing my assignment. In my youth I thought not, but now as I approach 80, I like to think his seemingly hurtful attitude was really an act of kindness,,,,,

— *Jim Terry*

TABLE 2-2

The Number-Frequency Relationship, $N(f^2 - 1/4) = C$, of (I) some Arbitrary Lower Frequencies of (II) Joyce's *Ulysses* and (III) four Latin plays of Plautus.

I Frequency (f)	Calculated $N(f^2 - 1/4)$	
	II Ulysses	III Plautus
1	12,324	4,075
2	15,410	4,490
3	19,193	4,280
4	20,239	4,750
