## The meaning of pings:

"A factorial study of complex auditory stimuli (passive sonar sounds)" 🗹

L. M. Solomon, Unpublished Doctoral Dissertation, University of Illinois, , , 1954. [23]

#### From the introduction:

This study represents the convergence of three disparate areas of investigation in an attempt to analyze one of the many problems encountered in the study of human factors in undersea warfare. The domains referred to are these:

naval sonar,

& the nature of "meaning,"

and multidimensional scaling techniques.

The problem may be stated as follows: In the detection and recognition of underwater sounds by the use of sonar equipment, what are the discriminative cues employed by the sonar operator? More generally, what factors does the operator utilize in decoding the significance of sonar signals?'

"An Approach to Environmental Psychology." **a** 🗷 by Mehrabian and Russell (1974). [7]

"The basic emotional impact of environments"

Mehrabian and Russell, Perceptual and motor skills, **38**, 283–301, 1974. [8]

"Semantic differential studies, in particular, have shown that human judgments of diverse samples of stimuli can be characterized in terms of three dimensions: evaluation, activity, and potency. We have termed the corresponding emotional responses pleasure, arousal, and dominance."

"Thus, each dimension is, in principle, functionally independent of the other two; none of the three dimensions could be subsumed by the others." The PoCSverse Meaning 15 of 76

Valence scale presented to participants as a 'happy-unhappy scale.'

Participants were further told:

"At one extreme of this scale, you are happy, pleased, satisfied, contented, hopeful. ...

The other end of the scale is when you feel completely unhappy, annoyed, unsatisfied, melancholic, despaired, or bored."

The Hedonometer was always about essential meaning.

### We now know that ANEW is a no-no:

Problem: Expert-chosen list of  $\sim$  1,000 words.

Fine words but poorly cover real texts [16].

Wrongly suggests Arousal and Dominance are minimal relative to Valence. The PoCSverse Meaning 18 of 76

## NRC VAD Lexicon [10]

VAD endpoints:	Paradigm words and phrases presented to raters: [11]
highest valence	happiness, pleasure, positiveness, satisfaction, contentedness, hopefulness
lowest valence	unhappiness, annoyance, negativeness, dissatisfaction, melancholy, despair
highest arousal	arousal, activeness, stimulation, frenzy, jitteriness, alertness
lowest arousal	unarousal, passiveness, relaxation, calmness, sluggishness, dullness, sleepiness
highest dominance	dominant, in control of the situation, powerful, influential, important, autonomous
lowest dominance	submissive, controlled by outside factors, weak, influenced, cared-for, guided

Major problem 5: Imposing dimensions through clouds of endpoint descriptors.

## NRC VAD study: 20,007 words:

# Standard correlations suggests a bit of Barney Rubble:

$$R(V, A) \simeq -0.268$$
$$R(A, D) \simeq 0.302$$
$$R(D, V) \simeq 0.488$$

## Nutshellingly:

- Power-danger-structure framework emerges in distinct settings, fitting types and tokens.
- Safety bias of communication refines Pollyanna Principle of positivity
- A Happiness (a mislead) = Power + Safety
- Emotions map onto powerful-safe and danger axes.
- & Life: Power-danger compass for survival
- Somplement to information theory which is meaning-free. [21, 22]
- Ousiometer can be improved and refined.
- Danger permeates stories (more than conflict)
- Contagion possibility: Measure spread and competition of stories through ousiometric distillation
