GROUNDHOG DAY

PG 1993, Comedy/Romance, 1h 36m

TOMATOMETER 86 Reviews AUDIENCE SCORE 250,000+ Ratings

Generally favorable" according to metacritic: 60 to 90 🗹.

The PoCSverse The Teletherm 7 of 25

Groundhog Day

Solstices

Cherry blossoms

End points:

- A 90 rating on Metacritic from the Washington Post: "With a script as beautifully complex as this one, Ramis and his cast have half of their work done for them. There is a moral to the tale as well, and it even strikes an uplifting note. But, for once, the audience isn't forced to surrender its intelligence (or its healthy cynicism) to embrace the film's sunny resolution."
- A 60 rating C on Metacritic, somehow also from the Washington Post:

"The trouble is, you'll feel like you've been through too many same days yourself. With its zany daily episodes, "Groundhog" gets stuck in a non-progressive repetition." The PoCSverse The Teletherm 8 of 25

Solstices

Cherry blossoms

Teletherms

Solstices have some complications:

- June 20/21-ish: Northern hemisphere's estival solistice and the Southern hemisphere's hibernal solstice.
- December 21/22-ish: Northern hemisphere's hibernal solistice and the Southern hemisphere's estival solstice.
- But because of tilts and ellipses the earliest and latest sunrises and sunsets I don't happen on the solstice.
- Earliest sunset in Burlington, Vermont?
 4:12 pm, December 9, 2021
- Latest sunrise in Burlington, Vermont?
 7:29 am, December 30, 2021–January 9, 2022
- 🛞 Varies across latitudes and planets.

Teletherms

Cherry blossoms: The 12 hundred year data set

- WaPo, 2017: Japan's cherry blossoms signal warmest climate in more than 1,000 years
- Solution WaPo, 2021: Japan's Kyoto cherry blossoms peak on earliest date in 1,200 years, a sign of climate change

Teletherms

From found 2009 notes:

- 🗞 Frigistice (winter) and Thermistice (summer)
- Conflation of measurable with important (delicate) Importance of statistical measurements. Appreciation of randomness, good to encode. The teletherm. Solstice.
- I propose that the statistically coldest and warmest days of the year be known as the teletherms, and that these days should be recognized. The word teletherm derives from the Greek roots for end or terminal (telos-) and heat (-therm), in analogy with solstice (Latin for sun-stop). The hibernal teletherm falls roughly on January 31, and the esteval teletherm on July 31.
- The solstices and equinoxes have been celebrated by human civilations for thousands of years, and their measurement
- 🗞 Equitherms.
- 🚳 Groundhog day!!! February 3
- 🚳 July 17 (July 16 in a Leap Year)
- 🗞 January 25 = day when 50% of years have experience their coldest day for the winter.
- 🚳 thermological winter
- Imbole one of the cross-quarter days, halfway between the winter solstice and the vernal equinox
