Frame 2/38

Semester projects

The Plan

Suggestions for Projects

References

Requirements:

- 1. \approx 5 minute introduction to project (fourth week)
- 2. 15 to 20 minute final presentation
- 3. Report: \geq 5 pages (single space), journal-style

Frame 3/38

Narrative hierarchy

Presenting at many scales:

- 1 to 3 word encapsulation, a soundbite,
- a sentence/title,
- a few sentences,
- a paragraph,
- a short paper,
- a long paper,
- **.** . . .

The Plan

Suggestions for Projects

References

Frame 4/38

Suggestions for Projects

References

- Develop and elaborate an online experiment to study some aspect of social phenomena
- e.g., cheating, cooperation, influence, decision-making, etc.

Frame 5/38

Suggestions for Projects

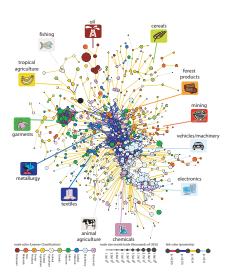

References

- Study collective creativity arising out of social interactions
- Productivity, wealth, creativity, etc. appear to increase superlinearly with population
- ► Start with Bettencourt et al.'s "Growth, innovation, scaling, and the pace of life in cities" [2]

Frame 6/38

- Study Hidalgo et al.'s "The Product Space Conditions the Development of Nations" [9]
- How do products depend on each other, and how does this network evolve?

The Plan

Suggestions for Projects

References

Frame 7/38

Suggestions for Projects

References

- Physics/Society—Wars: Study work that started with Lewis Richardson's "Variation of the frequency of fatal quarrels with magnitude" in 1949.
- Specifically explore Clauset et al. and Johnson et al.'s work ^[4, 10] on terrorist attacks and civil wars

Frame 8/38

Suggestions for Projects

References

- Study collective tagging (or folksonomy)
- e.g., del.icio.us, flickr
- See work by Bernardo Huberman et al. at HP labs.

Frame 9/38

References

- Study games (as in game theory) on networks.
- For cooperation: Review Martin Nowak's recent piece in Science: "Five rules for the evolution of cooperation." [13]
- Much work to explore: voter models, contagion-type models, etc.

Frame 10/38

Suggestions for Projects

References

- Semantic networks: explore word-word connection networks generated by linking semantically related words.
- More general: Explore language evolution
- One paper to start with: "The small world of human language" by Ferrer i Cancho and Solé [8]

Frame 11/38

- Investigate Service Science, which doesn't sound very good but IBM believes will be bigger than computer science.
- Definition: "Service Science, Management, and Engineering (SSME) is an interdisciplinary approach to the study, design, and implementation of service systems—complex systems in which specific arrangements of people and technologies take actions that provide value for others."

Suggestions for Projects

References

Frame 12/38

Suggestions for Projects

References

- Investigate safety codes (building, fire, etc.).
- What kind of relational networks do safety codes form? How have they evolved?

Frame 13/38

Suggestions for Projects

References

- Statistics: Study Peter Hoff's (and others') work on latent variables.
- Idea: explain connection pattern in a network through hidden individual or dyadic variables
- This method has been applied to the study of international relations networks.

Frame 14/38

Suggestions for Projects

References

Study Stuart Kauffman's nk boolean networks which model regulatory gene networks [11]

Frame 15/38

References

- Engineering: Read and critically explore Bejan's book "Shape and Structure, from Engineering to Nature." [1]
- Bejan asks why we see branching network flow structures so often in Nature—trees, rivers, etc.

Frame 16/38

he Plan

Suggestions for Projects

References

► Read and critique "Historical Dynamics: Why States Rise and Fall" by Peter Turchin. [14]

Frame 17/38

Suggestions for Projects

References

Explore work by Doyle, Alderson, et al. as well as Pastor-Satorras et al. on the structure of the Internet.

Frame 18/38

Suggestions for **Projects**

References

Review: Study Castronova's and others' work on massive multiplayer online games. How do social networks form in these games? [3]

Frame 19/38

References

- Study Michael Kearns and others' work on Cobot. Very cool.
- ▶ See http://cobot.research.att.com/.

Frame 20/38

References

- Study Kearns et al.'s experimental studies of people solving classical graph theory problems [12]
- "An Experimental Study of the Coloring Problem on Human Subject Networks"
- (Possibly) Run some of these experiments for our class.

Frame 21/38

Suggestions for Projects

References

- Study phyllotaxis, how plants grow new buds and branches.
- Some delightful mathematics appears involving the Fibonacci series.
- Excellent work to start with: "Phyllotaxis as a Dynamical Self Organizing Process: Parts I, II, and III" by Douady and Couder [5, 6, 7]

Frame 22/38

Suggestions for Projects

▶ Biology: Study leaf network patterns.

Frame 23/38

Suggestions for Projects

▶ Biology: Study spider webs.

Frame 24/38

he Plan

Suggestions for Projects

leterences

Vague/Large: Study amazon's recommender networks.

Frame 25/38

Suggestions for Projects

References

Vague/Large: Study Netflix's open data (movies and people form a bipartite graph).

Frame 26/38

Vague/Large: Study how the Wikipedia's content is interconnected.

The Plan

Suggestions for Projects

eferences

Frame 27/38

he Plan

Suggestions for Projects

References

Vague/Large: How do countries depend on each other for water, energy, people (immigration), investments?

Frame 28/38

ne Pian

Suggestions for Projects

eterences

Vague/Large: How is the media connected? Who copies whom?

Frame 29/38

he Plan

Suggestions for Projects

References

Vague/Large: How does advertising work collectively? For example, does one car manufacturers' ads indirectly help other car manufacturers?

Frame 30/38

he Plan

Suggestions for Projects

References

Vague/Large: Anything interesting to do with evolution, biology, ethics, religion, history, influence, food, international relations, . . .

Frame 31/38

The Plan

Suggestions for Projects

eterences

Vague/Large: Study spreading of neologisms.

Frame 32/38

he Plan

Suggestions for Projects

leterences

Vague/Large: Study spreading of anything where influence can be measured.

Frame 33/38
