

### George Kingsley Zipf:

#### In brief:

- Zipf (⊞) (1902–1950) was a linguist at Harvard, specializing in Chinese languages.
- Unusual passion for statistical analysis of texts.
- Studied human behavior much more generally...

### Zipf's masterwork:

- "Human Behavior and the Principle of Least Effort" Addison-Wesley, 1949 Cambridge, MA<sup>[2]</sup>
- ► Bonus field of study: <u>Glottometrics.</u> (⊞)
- ► Bonus 'word' word: <u>Glossolalia.</u> (⊞)

### Human Behavior/Principle of Least Effort:

#### From the Preface—

Nearly twenty-five years ago it occurred to me that we might gain considerable insight into the mainsprings of human behavior if we viewed it purely as a natural phenomenon like everything else in the universe, ...

#### And—

... the expressed purpose of this book is to establish The Principle of Least Effort as the primary principle that governs our entire individual and collective behavior ... Data from our mar Zipf

### The Principle of Least Effort:

### Zipf's framing (p. 1):

"... a person in solving his immediate problems will view these against the background of his probable future problems *as estimated by himself*."

"... he will strive ... to minimize the *total work* that he must expend in solving *both* his immediate problems *and* his probable future problems."

"[he will strive to] minimize the *probable average rate of his work-expenditure...*"

### Zipfian empirics:

▶ vocabulary balance:  $f \sim r^{-1} \rightarrow r \cdot f \sim \text{constant}$ (*f* = frequency, *r* = rank).

TABLE 2-1 Arbitrary Ranks with Frequencies in James Joyce's <i>Ulysses</i> (Hanley Index)				
10	2,653	26,530	265,500	
20	1,311	26,220	262,200	
30	926	27,780	277,800	
40	717	28,680	286,800	
50	556	27,800	278,800	
100	265	26,500	265,000	
200	133	26,600	266,000	
300	84	25,200	252,000	
400	62	24,800	248,000	
500	50	25,000	250,000	
1,000	26	26,000	260,000	
2,000	12	24,000	240,000	
3,000	8	24,000	240,000	
4,000	6	24,000	240,000	
5,000	5	25,000	250,000	
10,000	2	20,000	200,000	
20,000	1	20,000	200,000	
29,899	1	29,899	298,990	

### Rampaging research

Within Human Behavior and the Principle of Least Effort:

- City sizes
- # retail stores in cities
- # services (barber shops, beauty parlors, cleaning, ...)
- # people in occupations
- # one-way trips in cars and trucks vs. distance

- # new items by dateline
- weight moved between cities by rail
- # telephone messages between cities
- # people moving vs. distance
- # marriages vs. distance
- Observed general dependency of 'interactions' between cities A and B on P<sub>A</sub>P<sub>B</sub>/D<sub>AB</sub> where P<sub>A</sub> and P<sub>B</sub> are population size and D<sub>AB</sub> is distance between A and B.

### Zipf's basic idea:

Forces of Unification and Diversification:

- Easiest for the speaker to use just one word.
  - Encoding is simple but decoding is hard
- Zipf uses the analogy of tools: one tool for all tasks.
- Optimal for listener if all pieces of information correspond to different words (or morphemes).
- Analogy: a specialized tool for every task.
  - Decoding is simple but encoding is hard
- Zipf thereby argues for a tension that should lead to an uneven distribution of word usage.
- No formal theory beyond this...

Article length in the Encyclopedia Britannica:

- Fig. 5-3. The number of different articles of like length in samples of the 11th edition of the Encyclopaedia Britannica. Lengths in inches.
- (?) slope of -3/5 corresponds to  $\gamma = 5/3$ .
