Basic definitions

Complex: (Latin = with + fold/weave (com + plex))

Adjective

- ▶ Made up of multiple parts; intricate or detailed.
- ▶ Not simple or straightforward.

Basic definitions

Complex System—Basic ingredients:

- ▶ Relationships are nonlinear
- ▶ Relationships contain feedback loops
- ▶ Complex systems are open (out of equilibrium)
- ▶ Memory
- ▶ Modular (nested)/multiscale structure
- ▶ Opaque boundaries
- ▶ May result in emergent phenomena

[Class admin](#)[Basic definitions](#)[Books](#)[Examples of
Complex Networks](#)[Properties of
Complex Networks](#)[Modelling Complex
Networks](#)[Nutshell](#)[References](#)

Basic definitions

Network: (net + work, 1500's)

Noun:

1. Any interconnected group or system
2. Multiple computers and other devices connected together to share information

Verb:

1. To interact socially for the purpose of getting connections or personal advancement
2. To connect two or more computers or other computerized devices

[Class admin](#)[Basic definitions](#)[Books](#)[Examples of
Complex Networks](#)[Properties of
Complex Networks](#)[Modelling Complex
Networks](#)[Nutshell](#)[References](#)

- ▶ Many complex systems can be regarded as complex networks of physical or abstract interactions
- ▶ Opens door to mathematical and numerical analysis
- ▶ Dominant approach of last decade of a theoretical-physics/stat-mechish flavor.

Nodes = A collection of entities which have properties that are somehow related to each other

- ▶ e.g., people, forks in rivers, proteins, webpages, organisms,...

Basic definitions

Links = Connections between nodes

- ▶ **links**
 - ▶ may be real and fixed (rivers),
 - ▶ real and dynamic (airline routes),
 - ▶ abstract with physical impact (hyperlinks),
 - ▶ or purely abstract (semantic connections between concepts).
- ▶ **Links** may be directed or undirected.
- ▶ **Links** may be binary or weighted.

[Class admin](#)[Basic definitions](#)[Books](#)[Examples of
Complex Networks](#)[Properties of
Complex Networks](#)[Modelling Complex
Networks](#)[Nutshell](#)[References](#)

Node degree = Number of links per node

- ▶ Notation: Node i 's degree = k_i .
- ▶ $k_i = 0, 1, 2, \dots$
- ▶ Notation: the average degree of a network = $\langle k \rangle$
(and sometimes as z)

Basic definitions

Adjacency matrix:

- ▶ We represent a graph or network by a matrix A with link weight a_{ij} for nodes i and j in entry (i, j) .
- ▶ e.g.,

$$A = \begin{bmatrix} 0 & 1 & 1 & 1 & 0 \\ 0 & 0 & 1 & 0 & 1 \\ 1 & 0 & 0 & 0 & 0 \\ 0 & 1 & 0 & 0 & 1 \\ 0 & 1 & 0 & 1 & 0 \end{bmatrix}$$

Examples

What passes for a complex network?

- ▶ Complex networks are **large** (in node number)
- ▶ Complex networks are **sparse** (low edge to node ratio)
- ▶ Complex networks are usually **dynamic** and **evolving**
- ▶ Complex networks can be social, economic, natural, informational, abstract, ...
- ▶ Isn't this graph theory?: Yes, but emphasis is on data and mechanistic explanations...

A notable feature of large-scale networks:

- ▶ Graphical renderings of complex networks are often just a big mess.

Some key aspects of real complex networks:

- ▶ degree distribution
 - ▶ assortativity
 - ▶ homophily
 - ▶ clustering
 - ▶ motifs
 - ▶ modularity
 - ▶ concurrency
 - ▶ hierarchical scaling
 - ▶ network distances
 - ▶ centrality
 - ▶ efficiency
 - ▶ robustness
- ▶ + Coevolution of network structure and processes on networks.

Modelling Complex
Networks

Nutshell

References

1. degree distribution P_k

- ▶ P_k is the probability that a randomly selected node has degree k
- ▶ k = node degree = number of connections
- ▶ **ex 1:** Erdős-Rényi random networks:

$$P_k = e^{-\langle k \rangle} \langle k \rangle^k / k!$$

- ▶ Distribution is Poisson

Class admin

Basic definitions

Books

Examples of
Complex Networks

Properties of
Complex Networks

Modelling Complex
Networks

Nutshell

References

1. degree distribution P_k

- ▶ ex 2: “Scale-free” networks: $P_k \propto k^{-\gamma} \Rightarrow$ ‘hubs’
- ▶ link cost controls skew
- ▶ hubs may facilitate or impede contagion

Note:

- ▶ Erdős-Rényi random networks are a *mathematical construct*.
- ▶ 'Scale-free' networks are **growing networks** that form according to a **plausible mechanism**.
- ▶ Randomness is out there, just not to the degree of a completely random network.

2. assortativity/3. homophily:

- ▶ Social networks: Homophily (☐) = birds of a feather
- ▶ e.g., degree is standard property for sorting: measure degree-degree correlations.
- ▶ **Assortative** network: ^[10] similar degree nodes connecting to each other.
*Often **social**: company directors, coauthors, actors.*
- ▶ **Disassortative** network: high degree nodes connecting to low degree nodes.
*Often **techological** or **biological**: Internet, WWW, protein interactions, neural networks, food webs.*

4. clustering:

- ▶ Your friends tend to know each other.
- ▶ Two measures:
 1. Watts & Strogatz^[19]

$$C_1 = \left\langle \frac{\sum_{j_1 j_2 \in \mathcal{N}_i} a_{j_1 j_2}}{k_i(k_i - 1)/2} \right\rangle_i$$

2. Newman^[11]

$$C_2 = \frac{3 \times \#triangles}{\#triples}$$

Class admin

Basic definitions

Books

Examples of
Complex Networks

Properties of
Complex Networks

Modelling Complex
Networks

Nutshell

References

Properties

First clustering measure:

- ▶ C_1 is the **average fraction of pairs of neighbors who are connected.**
- ▶ Fraction of pairs of neighbors who are connected is

$$\frac{\sum_{j_1 j_2 \in \mathcal{N}_i} a_{j_1 j_2}}{k_i(k_i - 1)/2}$$

where k_i is node i 's degree, and \mathcal{N}_i is the set of i 's neighbors.

- ▶ Averaging over all nodes, we have

$$C_1 = \frac{1}{n} \sum_{i=1}^n \frac{\sum_{j_1 j_2 \in \mathcal{N}_i} a_{j_1 j_2}}{k_i(k_i - 1)/2} = \left\langle \frac{\sum_{j_1 j_2 \in \mathcal{N}_i} a_{j_1 j_2}}{k_i(k_i - 1)/2} \right\rangle_i$$

[Class admin](#)

Properties

Triples and triangles

- ▶ Nodes i_1 , i_2 , and i_3 form a **triple** around i_1 if i_1 is connected to i_2 and i_3 .
- ▶ Nodes i_1 , i_2 , and i_3 form a **triangle** if each pair of nodes is connected
- ▶ The definition

$$C_2 = \frac{3 \times \# \text{triangles}}{\# \text{triples}}$$

measures the fraction of **closed triples**

- ▶ Social Network Analysis (SNA): fraction of **transitive triples**.
- ▶ The '3' appears because for each triangle, we have 3 closed triples.

5. motifs:

- ▶ small, recurring functional subnetworks
- ▶ e.g., Feed Forward Loop:

Shen-Orr, Uri Alon, *et al.* [13]

6. modularity and structure/community detection:

Clauset *et al.*, 2006 ^[5]: NCAA football

References

9. network distances:

(a) shortest path length d_{ij} :

- ▶ Fewest number of steps between nodes i and j .
- ▶ (Also called the chemical distance between i and j .)

(b) average path length $\langle d_{ij} \rangle$:

- ▶ Average shortest path length in whole network.
- ▶ Good algorithms exist for calculation.
- ▶ Weighted links can be accommodated.

Class admin

Basic definitions

Books

Examples of
Complex Networks

Properties of
Complex Networks

Modelling Complex
Networks

Nutshell

References

9. network distances:

- ▶ **network diameter d_{\max} :**
Maximum shortest path length between any two nodes.
- ▶ **closeness $d_{cl} = [\sum_{ij} d_{ij}^{-1} / \binom{n}{2}]^{-1}$:**
Average 'distance' between any two nodes.
- ▶ Closeness handles disconnected networks ($d_{ij} = \infty$)
- ▶ $d_{cl} = \infty$ only when all nodes are isolated.
- ▶ Closeness perhaps compresses too much into one number

10. centrality:

- ▶ Many such measures of a node's 'importance.'
- ▶ **ex 1:** Degree centrality: k_i .
- ▶ **ex 2:** Node i 's betweenness
= fraction of shortest paths that pass through i .
- ▶ **ex 3:** Recursive centrality: Hubs and Authorities
(Kleinberg^[8])

Some important models:

1. generalized random networks (touched on in 300)
2. scale-free networks (田) (covered in 300)
3. small-world networks (田) (covered in 300)
4. statistical generative models (p^*)
5. generalized affiliation networks (partly covered in 300)

Class admin

Modelling Complex
Networks

Nutshell

References

1. generalized random networks:

- ▶ Arbitrary degree distribution P_k .
- ▶ Wire nodes together randomly.
- ▶ Create ensemble to test deviations from randomness.
- ▶ Interesting, applicable, rich mathematically.
- ▶ We will have fun with these guys...

2. 'scale-free networks':

$$\begin{aligned}\gamma &= 2.5 \\ \langle k \rangle &= 1.8 \\ N &= 150\end{aligned}$$

- ▶ Introduced by Barabasi and Albert^[1]
- ▶ Generative model
- ▶ Preferential attachment model with growth:
- ▶ $P[\text{attachment to node } i] \propto k_i^\alpha$.
- ▶ Produces $P_k \sim k^{-\gamma}$ when $\alpha = 1$.
- ▶ Trickiness: other models generate skewed degree distributions.

[Class admin](#)[Basic definitions](#)[Books](#)[Examples of Complex Networks](#)[Properties of Complex Networks](#)[Modelling Complex Networks](#)[Nutshell](#)[References](#)

3. small-world networks

- ▶ Introduced by Watts and Strogatz [19]

Two scales:

- ▶ **local regularity** (an individual's friends know each other)
 - ▶ **global randomness** (shortcuts).
-
- ▶ Shortcuts allow disease to jump
 - ▶ Number of infectives increases exponentially in time
 - ▶ Facilitates synchronization

Overview Key Points:

- ▶ The field of complex networks came into existence in the late 1990s.
- ▶ Explosion of papers and interest since 1998/99.
- ▶ Hardened up much thinking about complex systems.
- ▶ Specific focus on networks that are **large-scale**, **sparse**, **natural** or **man-made**, **evolving** and **dynamic**, and (crucially) **measurable**.
- ▶ Three main (blurred) categories:
 1. **Physical** (e.g., river networks),
 2. **Interactional** (e.g., social networks),
 3. **Abstract** (e.g., thesauri).

Nutshell:

Overview Key Points (cont.):

- ▶ Obvious connections with the vast extant field of graph theory.
- ▶ But focus on dynamics is more of a physics/stat-mech/comp-sci flavor.
- ▶ Two main areas of focus:
 1. **Description:** Characterizing very large networks
 2. **Explanation:** Micro story \Rightarrow Macro features
- ▶ Some essential structural aspects are understood: degree distribution, clustering, assortativity, group structure, overall structure,...
- ▶ Still much work to be done, especially with respect to dynamics... **exciting!**
