# More on building random networks

- ▶ **Problem:** How much of a real network's structure is non-random?
- ▶ Key elephant in the room: the **degree distribution**  $P_k$ .
- ▶ First observe **departure** of  $P_k$  from a Poisson distribution.
- ▶ **Next:** measure the departure of a real network with a **degree frequency**  $N_k$  from a random network with the same degree frequency.
- ▶ Degree frequency  $N_k$  = observed frequency of degrees for a real network.
- ▶ **What we now need to do:** Create an ensemble of random networks with degree frequency  $N_k$  and then compare.

# Building random networks: Stubs

## Phase 1:

- ▶ **Idea:** start with a soup of unconnected nodes with **stubs** (half-edges):

- ▶ Randomly select stubs (not nodes!) and connect them.
- ▶ Must have an even number of stubs.
- ▶ Initially allow self- and repeat connections.

# Building random networks: Stubs

- ▶ Must have an even number of stubs.
- ▶ Initially allow **self-** and **repeat** connections.

# Building random networks: First rewiring

## Phase 2:

- ▶ Now find any (A) self-loops and (B) repeat edges and **randomly rewire** them.

- ▶ **Being careful:** we can't change the degree of any node, so we can't simply move links around.
- ▶ **Simplest solution:** randomly rewire **two edges** at a time.

- ▶ **Being careful:** we can't change the degree of any node, so we can't simply move links around.
- ▶ **Simplest solution:** randomly rewire **two edges** at a time.

# General random rewiring algorithm

- ▶ Randomly choose **two edges**.  
(Or choose problem edge and a random edge)
- ▶ Check to make sure edges are **disjoint**.
- ▶ Rewire one end of each edge.
- ▶ Node degrees **do not change**.
- ▶ Works if  $e_1$  is a self-loop or repeated edge.
- ▶ Same as finding on/off/on/off 4-cycles, and rotating them.

# Sampling random networks

## Phase 2:

- ▶ Use rewiring algorithm to remove all self and repeat loops.

## Phase 3:

- ▶ Randomize network wiring by applying rewiring algorithm liberally.
- ▶ Rule of thumb: # Rewirings  $\simeq 10 \times$  # edges<sup>[1]</sup>.

# Sampling random networks

## Phase 2:

- ▶ Use rewiring algorithm to remove all self and repeat loops.

## Phase 3:

- ▶ **Randomize network** wiring by applying rewiring algorithm liberally.
- ▶ Rule of thumb: # Rewirings  $\simeq 10 \times$  # edges<sup>[1]</sup>.

- ▶ **Rule of thumb:** # Rewirings  $\simeq 10 \times$  # edges<sup>[1]</sup>.

# Random sampling

- ▶ **Problem** with only joining up stubs is **failure** to randomly sample from all possible networks.
- ▶ Example from Milo et al. (2003) <sup>[1]</sup>:

# Random sampling

- ▶ **Problem** with only joining up stubs is **failure** to randomly sample from all possible networks.
- ▶ Example from Milo et al. (2003) [1]:

(a)

1 configuration

(b)

90 configurations

- ▶ What if we have  $P_k$  instead of  $N_k$ ?
- ▶ Must now create nodes before start of the construction algorithm.
- ▶ Generate  $N$  nodes by sampling from degree distribution  $P_k$ .
- ▶ Easy to do exactly numerically since  $k$  is discrete.
- ▶ **Note:** not all  $P_k$  will always give nodes that can be wired together.

- ▶ What if we have  $P_k$  instead of  $N_k$ ?
