Basics:

- ▶ **Instructor:** Prof. Peter Dodds
- ▶ **Lecture room and meeting times:**
307 Lafayette, Tuesday and Thursday, 10:00 am to 11:30 pm
- ▶ **Office:** 203 Lord House, 16 Colchester Avenue
- ▶ **E-mail:** pdodds@uvm.edu
- ▶ **Website:**
<http://www.uvm.edu/pdodds/teaching/2009-08UVM-300/> (田)
- ▶ **Suggested Texts:**
 - ▶ “Critical Phenomena in Natural Sciences: Chaos, Fractals, Selforganization and Disorder: Concepts and Tools” by Didier Sornette^[12].
 - ▶ “Critical Mass: How One Thing Leads to Another” by Philip Ball^[3]

Grading breakdown:

- ▶ **Projects/talks (55%)**—Students will work on semester-long projects. Students will develop a proposal in the first few weeks of the course which will be discussed with the instructor for approval. Details: 15% for the first talk, 20% for the final talk, and 20% for the written project.
- ▶ **Assignments (40%)**—All assignments will be of equal weight and there will be three or four of them.
- ▶ **General attendance/Class participation (5%)**

How grading works:

Questions are worth 3 points according to the following scale:

- ▶ 3 = correct or very nearly so.
- ▶ 2 = acceptable but needs some revisions.
- ▶ 1 = needs major revisions.
- ▶ 0 = way off.

Complicated versus Complex.

- ▶ Complicated: Mechanical watches, airplanes, ...
- ▶ Engineered systems can be made to be **highly robust but not adaptable**.
- ▶ But engineered systems can become complex (power grid, planes).
- ▶ They can also fail spectacularly.
- ▶ Explicit distinction: Complex Adaptive Systems.

Welcome to the COMPLEXITY SOCIETY

"The Application of Complexity Science to Human Affairs"

The Complexity Society provides a focal point for people in the UK interested in complexity. It is a community that uses complexity science to rethink and reinterpret all aspects of the world in which we live and work.

Its core values are OPENNESS, EQUALITY and DIVERSITY.

- Open to all, open to ideas, open in process and activities
- Equality, egalitarian, non-hierarchical, participative
- Diverse, connecting and embracing a wide range of views, respecting differences

The society objectives are to promote the theory of complexity in education, government, the health service and business as well as the beneficial application of complexity in a wide variety of social, economic, scientific and technological contexts such as sources of competitive advantage, business clusters and knowledge management.

Complexity includes ideas such as complex adaptive systems, self-organisation, co-evolution, agent based computer models, chaos, networks, emergence and fractals.

Membership is open to all and current members include people from universities, business, and government funded organisations.

Membership

To join TCS apply here.

Complexity Society Newsletter

The August 2007 edition is now available.

Complexity Digest

The current issue of Complexity Digest 2007.29 is now available on-line.

Recent Events:

Summer School in Complexity Science organised by Imperial College, London, Wye College, Kent, UK. 8-17th July 2007.

Forthcoming Events:

ECES'07 European Conference on Complex Systems, Dresden, Germany. 1-5th October 2007.

New Paper:

The Fractal Imagination: New Resources for Conceptualising Creativity.

Journal

'Emergence: Complexity & Organization (ECO)', A journal of research, theory and practice on Organisations as complex systems.

The Wikipedia on [Emergence](#):

“In philosophy, systems theory and the sciences, emergence refers to the way complex systems and patterns arise out of a multiplicity of relatively simple interactions. ... [emergence is central to the physics of complex systems and yet very controversial.](#)”

Emergence:

Examples:

- ▶ Fundamental particles \Rightarrow Life, the Universe, and Everything
- ▶ Genes \Rightarrow Organisms
- ▶ Brains \Rightarrow Thoughts
- ▶ Fireflies \Rightarrow Synchronized Flashes
- ▶ People \Rightarrow World Wide Web
- ▶ People \Rightarrow Behavior in games not specified by rules (e.g., bluffing in poker)
- ▶ People \Rightarrow Religion

Definitions

There appears to be **two types of emergence**:

Weak emergence:

System-level phenomena is different from that of its constituent parts yet can be connected theoretically.

Strong emergence:

System-level phenomena fundamentally cannot be deduced from how parts interact.

(Strong emergence is what Mark Bedau calls **magic**...)

Complex Systems enthusiasts often decry **reductionist** approaches . . .

But reductionism seems to be misunderstood.

Reductionist techniques can explain weak emergence (e.g., phase transitions).

'A Miracle Occurs' explains strong emergence.

Self-organization but no Emergence?

Water above and near the freezing point.

Emergence may be limited to a low scale of a system.

How do we measure the complexity of a system?

Frame 97/108

(1) **Entropy**: number of microstates that could underlie a particular macrostate.

- ▶ Used in information theory and statistical mechanics/thermodynamics.
- ▶ Measures how uncertain we are about the details of a system.
- ▶ Problem: Randomness maximizes entropy, perfect order minimizes.
- ▶ Our idea of 'maximal complexity' is somewhere in between...

Two ways for order to appear in a system without offending the second law of thermodynamics:

- (1) Entropy of the system decreases at the expense of entropy increasing in the environment.
- (2) The system becomes more ordered macroscopically while becoming more disordered microscopically.

So maybe no one true measure of complexity exists.

Cosma Shalizi:

“Every few months seems to produce another paper proposing yet another measure of complexity, generally a quantity which can't be computed for anything you'd actually care to know about, if at all. These quantities are almost never related to any other variable, so they form no part of any theory telling us when or how things get complex, and are usually just quantification for quantification's own sweet sake.”
