## Outline

Benford's Law

References

## The law of first digits

Benford's Law: (田)

$$P(\text{first digit} = d) \propto \log_b \left( 1 + \frac{1}{d} \right)$$

for certain sets of 'naturally' occurring numbers in base  $b$

- ▶ Around 30.1% of first digits are '1', compared to only 4.6% for '9'.
- ▶ First observed by Simon Newcomb<sup>[2]</sup> in 1881 "Note on the Frequency of Use of the Different Digits in Natural Numbers"
- ▶ Independently discovered in 1938 by Frank Benford (田).
- ▶ Newcomb almost always noted but Benford gets the stamp.

## Benford's Law—The Law of First Digits

Benford's law

Benford's Law  
 References

Observed for

- ▶ Fundamental constants (electron mass, charge, etc.)
- ▶ Utility bills
- ▶ Numbers on tax returns (ha!)
- ▶ Death rates
- ▶ Street addresses
- ▶ Numbers in newspapers
- ▶ Cited as evidence of fraud (田) in the 2009 Iranian elections.

# Essential story

$$\begin{aligned}
 P(\text{first digit} = d) &\propto \log_b \left( 1 + \frac{1}{d} \right) \\
 &\propto \log_b \left( \frac{d+1}{d} \right) \\
 &\propto \log_b(d+1) - \log_b(d)
 \end{aligned}$$

► Observe this distribution if numbers are distributed uniformly in log-space:

$$P(\ln x) d(\ln x) \propto 1 \cdot d(\ln x) = x^{-1} dx$$

- Power law distributions at work again...
- Extreme case of  $\gamma \simeq 1$ .
